

AI Governance – from Gatekeeper to Enabler

How can we create a central platform that simplifies safe AI use, provides guidance, and brings governance to life in everyday work?

YOUR CHALLENGE

Develop a simple, intuitive prototype of a central AI governance platform for Finnova – as a front door for employees and a lifecycle cockpit for owners, ARB and GRC.

CONTEXT

AI should be as easy to use and as widely accessible as possible. At the same time, data protection, information security, regulatory requirements and internal policies must be complied with.

Governance should therefore not primarily act as a control mechanism or barrier, but as an enabler of safe use.

You will receive Finnova AI Governance as a reference – including roles, processes and principles. Your task is not to reinvent governance, but to translate it into a platform that works in everyday practice.

USER QUESTIONS

- Which AI tools am I allowed to use?
- What am I allowed to use a tool for?
- Which data may I use – and which may I not use?
- Which rules and requirements apply?
- How do I request a new AI tool?
- What do I do in case of changes or incidents?
- Where can I find guidance, examples and support?

DESIGN PRINCIPLE

Not: “You are not allowed to do that.”

Instead: “Yes – and this is how you can do it safely.”

THE LIFECYCLE

Discover Find and understand a tool

Apply Request a new tool

Assess Assess risk, data protection & compliance

Decide Approval by ARB

Enable Guidance, training & guardrails

Use Use safely and productively

Review Changes, Incidents & Re-Assessments

POSSIBLE MVP COMPONENTS

- AI governance homepage
- AI Allow List / Tool Catalogue
- Factsheet with do's & don'ts for each tool
- Wizard for new tool requests
- “My AI Tools” for tool owners
- ARB/GRC cockpit for assessments and decisions
- Review, change and incident process
- Optional: AI Governance Assistant

WHY HACK?

- You are working on a topic every organisation is tackling right now: making AI safe and widely usable.
- You show how governance becomes a product – where UX meets compliance.
- Your solution has direct impact: it can become the foundation for the actual Finnova platform.
- You gain first-hand insight into roles, processes and regulatory requirements.

GUIDING QUESTION

How can we ensure that an employee knows within two minutes whether and how they can safely use AI for their task?

NORTH STAR

Time to Safe AI Use

WHAT WE WANT TO SEE AT THE END

Not a finished GRC system. Use a clickable prototype and concrete user journeys to show how your solution makes AI use easier, provides guidance, clarifies responsibilities, reduces governance effort and increases security at the same time.

Do not digitise as much governance as possible – enable as much safe AI use as possible.
